Experience

Senior Software Engineer, TikTok – Singapore

Jul 2024 – Jul 2026

I was the FE lead of Widgets SDK + Marketplace serving as the dashboarding solution for TikTok Live Platform teams

- Architected the Widgets project reducing development cost by 300% for 5 teams with React/ECharts/ReactFlow
- Built a LLM powered conversational analytics tool reducing development cost by 20% using React and SSE
- Built SDKs snapshot regression test suite and monitoring to improve stability with Jest, RTL, Rstest and Slardar
- Developed a Golang service automating widgets metadata population into Elasticsearch store enabling LLM RAG
- Extracted and transformed data from underlying ClickHouse stores for use in widget service with SQL
- Minimized hand-coding for 7 engineers by promoting Claude Code agentic workflows, skills, and SDD workflow
- Upskilled 25+ engineers through quarterly sharings on platform architecture, AI coding tools and internal tools

Software Engineer, TikTok – Singapore

Aug 2022 – Jun 2024

I worked on the frontend of TikTok Live's AML Platform and frontend libraries

- Built core frontend components and promoted its usage to >100 engineers across multiple teams and products
- Built BFF service allowing FE teams to easily manage Lark credentials and documents using Node/Express
- Implemented application monitoring on AML Platform using internal Sentry SDK and platform
- Built FE of AML platform that helped alert financial investigators on suspicious behaviours (>100 monthly)

Frontend Software Engineer, Govtech – Singapore

Jun 2021 – July 2022

I worked on the frontend of Trusted Centre for Sensor Data platform

- Built a map visualisation platform that improved agencies ability to study trends and plan policies using MapboxGL
- Implemented team and recurrent data request workflows using React/Redux and MaterialUI
- Reduced regression bugs by achieving healthy frontend integration and end-to-end test coverage using Cypress
- Introduced parallelisation to frontend test suite using Cypress director service reducing CI run time by 100%
- Shared on various software engineering related topics during division level engineering sharing

Backend Software Engineer, NodeFlair – Singapore

May 2019 – Jan 2020

I worked on the talent platform which connects companies and tech talents

- Built dashboard and real-time chat services to increase match-to-hire rate (20%) using Rails and PostgreSQL
- Reduced AWS spendings by 50% by migrating from managed service (Beanstalk) to serverless service (Lambda)

Skills & Certifications

Languages: JavaScript/TypeScript · Node/Express · SQL

Technologies: React · Next.js · Redux · Tailwind CSS · Jest · SWR · Cypress · Docker · Microsoft Azure · AWS

Certifications: AZ-204 Azure Developer Associate · NUS Software Engineering Focus Area

Education

National University of Singapore – B.Comp Computer Science

2021
