Experience

Front End Software Engineer, TikTok – Singapore

Aug 2022 – Present

I worked on TikTok Live's Data Platform and led the Widgets SDK and Data UI library direction

- Built Widgets SDK and marketplace reducing development cost by 300% for 5 teams with React/ECharts
- Built data model pipeline builder interface used for >1k widget models so far with React/ReactFlow
- Built a LLM powered conversational analytics tool reducing development cost by 20% using React and SSE
- Built SDKs snapshot regression test suite and monitoring to improve stability with Jest, RTL, Rstest and Slardar
- Built reusable FE components and BFF layers used by >100 engineers across teams with React and Node/Express
- Minimized hand-coding for 7 engineers by promoting Claude Code agentic workflows, skills, and SDD workflow
- Developed a Golang service automating widgets metadata population into Elasticsearch store enabling LLM RAG
- Extracted and transformed data from underlying ClickHouse stores for use in widget service with SQL
- Upskilled 25+ engineers through quarterly sharings on platform architecture, AI coding tools and internal tools

Front End Software Engineer, Govtech – Singapore

Jun 2021 – July 2022

I worked on the Trusted Centre for Sensor Data platform

- Built a map visualisation platform that improved agencies ability to study trends and plan policies using MapboxGL
- Implemented team and recurrent data request workflows using React/Redux and MaterialUI
- Reduced regression bugs by achieving healthy frontend integration and end-to-end test coverage using Cypress
- Introduced parallelisation to frontend test suite using Cypress director service reducing CI run time by 100%
- Shared on various software engineering related topics during division level engineering sharing

Software Engineer Intern, Edison (YipitData) – California

Apr 2020 – Dec 2020

I worked on Edison Mail macOS(Electron) app used by 1.5 million users worldwide

- Improved 30% of users' experience by building a calendar app using React, SQLite, Caldav, Google Calendar API
- Improved responsiveness (>1sec) by implementing asynchronous calendar operations using Redux Observables

Junior Backend Software Engineer, NodeFlair – Singapore

May 2019 – Jan 2020

I worked on the talent platform which connects companies and tech talents

- Built dashboard and real-time chat services to increase match-to-hire rate (20%) using Rails and PostgreSQL
- Reduced AWS spendings by 50% by migrating from managed service (Beanstalk) to serverless service (Lambda)

Skills & Certifications

Languages: JavaScript/TypeScript · Node/Express · SQL

Technologies: React · Next.js · Redux · Tailwind CSS · Jest · SWR · Cypress · Docker · Microsoft Azure · AWS

Certifications: AZ-204 Azure Developer Associate · NUS Software Engineering Focus Area

Education

National University of Singapore – B.Comp Computer Science

2021
